Cognitive Accessibility Detection

Detected needs for a simpler interface

Skip to Manual Settings

Apply Suggested Simplification

Detection summary: The current dashboard contains too much information at once. Some elements may be distracting, and the layout may make it harder to focus on primary tasks.

What triggered the simplification

Short explanations (placeholders based on the detected needs).

🧩 Too much information Multiple panels compete for attention	**Reduce density; group content into fewer sections.**
🌀 Distracting elements Secondary details appear near primary tasks	**Emphasize essential actions; push secondary content below.**
🎯 Difficulty focusing Primary actions are not the most prominent	**Increase clarity by highlighting next steps.**

Suggested actions (preview only)

These options will be used in the simplified dashboard.

Simplify layout

Group content into fewer panels and larger sections

Recommended

Highlight primary tasks

Show essential actions as the main focus

Recommended

De-emphasize secondary info

Keep details accessible but not prominent

Optional

Open Validation Checklist

Continue to Simplified Dashboard

Simplified Dashboard
